

BASE (D104) — glue into the recess with C on the arrow, facing the tab

TOP DISC (D108) — cut out the circle, the hole and the 7 white windows

MEASURE THIS BAR WITH A RULER: it has to be exactly 100 mm.

Shorter than that and the PDF was scaled down — print again at 100% scale / actual size (uncheck "Fit to page").

Got X mm? Reprint at scale = $100 \times 100 \div X$. Check: base disc = 104 mm, top disc = 108 mm.

Dashed = cut line. I Only III m and VII carry a b9 — that is why they are the tensest degrees.
